## – PREMIUM COMMUNITY MESSAGE CENTER

Most message boards are hand-made with wood or unsightly vinyl, requiring almost yearly maintenance or simply falling into bad condition. Finally, there is a no-maintenance alternative. This outdoor bulletin board is all-aluminum, with 3 inch posts, aluminum backing and overhang, with a 30"x36" enclosed self-healing vinyl tackboard – fully qualified for OUTDOOR use. Over 400 sold!

- 30"x36" enclosure, architectural bronze color
- Size ~ 5-1/2 -6 ft height, 37" width (c-c)
- Shatter-resistant acrylic locking door with key
- Vinyl self-healing non-cork tackboard (Caramel)
- Black powder coated 3" posts & finials
- Two cross arm rear supports
- Powder coated aluminum backing with 9" overhang

*Note: Architectural Bronze is really close to black with slight brown color, sun exposure and the previous supplier makes it look more brown in these pictures.*

9" Overhang is Standard

Optional Panels

Standard configuration with NO OPTIONS

Letterboard option is an INSERT so you can use either Letterboard or underlying Tackboard.

Beware of competitors using cork, not suitable for outdoor use.

- Detailed installation instructions (with pictures) are included – see below.

**Base Price = \$1550**

**OPTIONS**

- \$150 Top Panel, \$150 Bottom Panel, \$250 both (\$50 for Border and/or other graphics)
- \$175 Letterboard Insert (1-1/2" letters \$25, 2" letters \$50, 3" letters \$150)
- \$75 custom tackboard color
- \$150 Extended Posts (for Pedestrian walk up) – 8.5 Ft (7 Ft is Std)
- \$350 LED light kit (w/ transformer)

**ASSEMBLY INSTRUCTIONS:**

**1. DIGGING POST HOLES**

- a. Approximate the location of the Message Board posts, by placing one Cross Arm on the ground. Mark or estimate the locations of the end rings; where the posts will be.
- b. Locate any Low Voltage wiring (seen here), or irrigation lines, or utilities to avoid hitting them.
- c. Dig a hole about 24 inches. This will put the final post height at about 5 foot from ground level. The hole diameter should be about 7-8 inches.

**2. HARDWARE AND BACKER ASSEMBLY**

- a. Take the 4 bolts and put a nut on each one and then a lock washer, leaving a gap of about one 1/16" between the nut and the lock washer.
- b. Lay the Flanged Backer panel on a flat surface that will not damage the panel.
- c. Insert a bolt in each of the 4 holes in the panel from the FRONT (flanged side), going through the holes in the flange/backer and the cross arms, and secure them using another lock washer and bolt on the back side. NOTE: nuts should be left somewhat loose and not fully tightened.

**3. SET ASSEMBLY IN HOLE**

- a. Pour about 4-6" of DRY concrete into each hole.
- b. Pick up entire assembly (cross arms, flanged backer, and 2 posts) and place into holes.
- c. Use level on cross arms and posts, and adjust to level. Tap on top of post with piece of wood and rubber mallet in order to achieve level and equal height of posts.
- d. Line up top posts so that from a side view, there appears to be one post.
- e. Pour additional DRY concrete into the holes and adjust levels often.
- f. Add water to the dry concrete. Complete pouring of dry concrete to the top of the holes and adding water.
- g. Continue to assure level arms and posts.
